

Accelerate Decision Making Across the Clinical Trial Ecosystem

Flywheel Validated gives life sciences companies an end-to-end, 21 CFR Part 11 compliant imaging data management platform for faster decision-making and time-to-market.

Gain more visibility and control

Clinical trials generate valuable imaging data that can help life sciences companies get to market faster and unlock secondary research. But it can be difficult to access and analyze this data without significant delays or compromises to compliance.

Flywheel Validated helps clinical trial stakeholders see and act on their clinical trial data while maintaining 21 CFR Part 11 compliance. It expands on the capabilities of the Flywheel medical imaging data management platform with validation features, offering advanced support for AI development, imaging reads and quality control.

Improve Efficiency

Flywheel Validated helps you receive data faster from clinical trials and easily automate workflows. This facilitates more informed go/no-go decisions — and ultimately faster time to market.

Activate Data

Don't just store your data. Securely aggregate, annotate, standardize and analyze petabytes of imaging data culled from multiple clinical trials to gain visibility of your entire data ecosystem.

Gain Greater ROI

With greater access and control, your imaging data moves from a cost center to a strategic asset. Activate existing data for secondary endpoint analysis, AI development and downstream usage in future studies.

End-to-end platform for imaging data management and analysis

Validation Support

- Export time-stamped audit trails for 21 CFR Part 11 compliance
- Lock data subject to audit or submission
- Leverage compliance support such as documentation and data management policies

Data Management

- Ingest, standardize, annotate and securely share data from multiple sources
- Use Flywheel Gears to automate data pre-processing and analytic pipelines
- Curate datasets for analysis and AI development

Custom Deployment

- Manage reads, forms and uploads with task manager module
- Use our Professional Services to consult on your needs, build custom workflows, and provide ongoing training and support

Choose Your Flywheel Deployment to Meet Your Provenance and Compliance Needs
